JOB PREFERENCES

Front-end Development   Shenzhen

EDUCATION

2014.9-2018.6	Hubei University of Science and Technology	Internet of Things Engineering

SKILLS

Commonly used tech stack primarily includes technologies like React and Node :

• Familiar with basic programming technologies such as HTML, CSS, and JavaScript.
• Familiar with web development frameworks like React and Next.
• Familiar with mobile development frameworks like Taro and React Native. • Familiar with micro-frontend architecture technologies like qiankun.
• Familiar with REST API development technologies such as Next API, Express, and MongoDB.
• Familiar with data collection technologies like Scrapy and Playwright.
• Familiar with CI/CD automation deployment technologies like Docker, Nginx, and GitHub Actions.
• Familiar with collaboration tools like Figma and Apifox.

WORK EXPERIENCE

2023.11-2024.11	Zhongtong Wenbo Company	Alibaba Cloud Infrastructure Architecture Department - Web Frontend

Next.js   Ant Design   Docusaurus

2021.2-2023.9	Tengyu Interactive Company	Tencent Platform and Content Group - Web Frontend

React

2018.3-2020.12	Augmentum Company	Research and Development Department - Web Frontend

React   Ant Design   Ant Design Mobile

PROJECT EXPERIENCE

2023.11-2024.11   **Kunlun Platform**

Project Background: The project involves AI inference algorithms for servers under different application scenarios and configurations, including metrics such as Throughput, QPS, and Latency.

Project Responsibilities: Independent front-end development, solution design, and review.
 • Built the front-end framework using Next.js + Ant Design.
 • Conducted requirement confirmation meetings with Product and Algorithm teams to discuss the business logic and interface parameters of each functional module.
 • Designed the front-end UI interface and communicated with Product to confirm details.
 • Implemented the layout and development of various modules, and conducted local mock development based on the interface documentation, facilitating interface integration work.
 • Deployed tests in the testing environment and handled bug fixes.

Technology Stack: Next.js + Ant Design

Project Achievements:
 • Completed the page development and integration of all modules.
 • Maintained common components.
Others:
 • Responsible for the design and development of the official website and documentation repository.

2021.2-2023.9   **Tencent Document Privatization**
                                   CRM

Project Background: A management system provided for Tencent Document's privatization clients, including modules for personalized management, resignation document management, capacity management, and more.

Project Responsibilities: Independent front-end development, solution design, and review.
 • Built the front-end framework using React and an internal UI library.
 • Held requirement confirmation meetings with product, back-end, and UI teams to discuss the business logic and design of each module.
 • Met with the back-end team to confirm the specifications of all interface fields and the schedule for joint debugging.
 • Implemented the layout and development of pages and components for each module according to Figma design drafts, and conducted local development using mock data based on interface documentation.
 • Confirmed the upstream and downstream interfaces involved and facilitated the joint debugging work for the interfaces.
 • Completed deployment testing in the testing environment and bug fixing.

Technology Stack: React, Tencent internal UI library

Project Achievements:
 • Completed the page development and joint debugging for all modules.
 • Maintained common components.
 • Organized relevant internal documentation.

2018.3-2020.12   **Bank CRM**

Project Background: A comprehensive CRM solution specifically designed for banks and enterprises, providing a series of functions such as institution management, customer management, and WeChat public account management.

Project Responsibilities: Core front-end development of the project
 • Responsible for the development and bug fixing of daily business modules.
 • Addressed performance issues in large data list scenarios by implementing a virtual list solution.
 • Developed a lottery activity component.

Technology Stack: React, Redux, React-Router, Ant Design, Ant Design Mobile

Project Achievements:
 • Responsible for the development and maintenance of several core modules, including institution management, QR code management, and content publishing management.
Others:
 • Maintained the WeChat H5 mall, responsible for the development of product pages and others.
 • Responsible for the development of pages for the Mid-Autumn Festival WeChat lottery activity.
